

Drywall Grid System Technical Guide Flat Ceilings

Armstrong[®]
CEILING SOLUTIONS

DRYWALL GRID SYSTEM

Flat Ceilings

Drywall Grid Systems

Features and Benefits

Armstrong Drywall Grid is fast and easy to install and an economical alternative to TCR and Furring Channel construction.

Applications

Armstrong Drywall Grid Systems offer flexible design solutions for:

- Flat and Curved Ceilings
- Bulkheads (Multiple Step and Curved)
- Transitions to Acoustical Ceilings
- Margins
- Perimeters
- Walls

Features

- **PeakForm**
Patented profile increases strength and stability for improved performance during installation
- **Knurled Face**
Positive screw penetration into tees
- **SuperLock / XL²**
Main Bar and Cross Runner clips are engineered for a strong secure connection and fast accurate alignment confirmed with an audible click; easy to remove and relocate
- **ScrewStop**
Reverse hem prevents screw spin off on Tee face
- **38mm Wide Face**
Main Bars and Cross Runners – easy installation of screw fixed plasterboard sheets
- **Rotary stitched Double Thickness Web**
For additional torsional strength and stability
- **Simple Integration of Mechanical Services**

Benefits

- Reduced installation time
- Reduced labour costs
- Reduced material costs and wastage
- Low 38mm profile across one plane
- Material off cuts can be used for bracing and as an alternative suspension method

Physical Data

- Material: Hot dipped galvanised steel
- Recycled Content: 25%
- Surface Finish: Z275 galvanised
- Main Bar / Cross Runner Interface: Joggled ends
- End Detail:
 - Main Bar: staked-on SuperLock clip
 - Cross Runner: staked-on XL² clip

Code Compliance

Armstrong DGS is designed and manufactured to comply with the following standards:

AS/NZS 2785-2020: Suspended Ceilings – Design and Installation

AS/NZ 2589-2007: Gypsum linings – Application and finishing

AS/NZ 1397-2002: Steel sheet and strip – Hot-dipped zinc-coated or aluminium/zinc-coated

AS/NZ 4600-2005: Cold-formed steel structures

AS/NZ 1170-2002: Structural Design Actions

Flat Ceilings

The Drywall Grid System is made up of Main Bars and Cross Runners that are suspended from the structural deck. Sections of Main Bars lock together end-to-end with Cross Runners spanning between the Main Bars.

The ends of the Main Bars and Cross Runners either lock into the wall Channel or are fixed to Angle Trims that run around the perimeter of the space.

Features

- Simple “two way” grid system for interior screw up ceilings
- Solutions for Bulkheads/special transitions
- Integration between plasterboard and acoustical panel ceilings
- Complete range of perimeter solutions including Pelmet

Main Bar: PeakForm 38 with Knurled Face and SuperLock Clip (bulb-to-bulb connection)

Item Number	Dimensions			Rout Spacing mm	Content / Carton / Weight		
	length (mm)	height (mm)	face (mm)		pcs	lm	kg
BP 794033	3600	38	38	150cc	12	43.2	24

Cross Runners: PeakForm 38 XL² with Knurled Face (stab connection, override)

Item Number	Dimensions			Rout Spacing mm	Content / Carton / Weight		
	length (mm)	height (mm)	face (mm)		pcs	lm	kg
BP 793033	1200	38	38	Centre	36	43.20	21

Flat Ceilings

Integrating Services

The Armstrong Drywall Grid System is designed to accommodate installation of mechanical services such as light fixtures and air registers. Fixtures can be simply framed regardless of orientation (parallel or perpendicular to Main Bars), as per the illustrations below.

Main Bars feature connection routs at 150mm centres for installation of additional Cross Runners so that fixtures can be framed and supported. The "3 Way Bite Clip" is applied where connections are required where no rout exists, such as connecting between Cross Runners.

Note: Light Fixtures Installed Perpendicular to Main Bars

1. Main Bars should be installed at 1250mm OC to accommodate Light Fixtures, providing a clear opening of 1212mm for easy installation. Standard 1250mm long Cross Runners are installed between Main Bars at 600mm OC, with additional Cross Runners to support and frame out the fixtures.
2. For shorter rectangular fixtures, (with length less than 1162mm) install Main Bars at 1200mm OC and apply typical 1200mm Cross Runners.

Legend

-  3 Way Bite Clip to be installed at Cross Runner connection where no rout is available

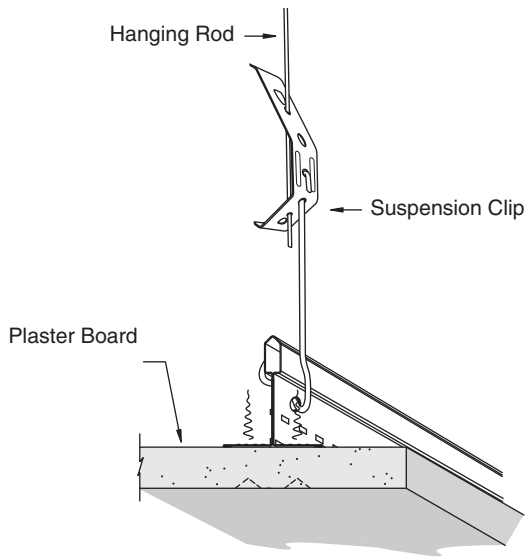

Squaring up the system

Ensure grid is square following installation of first two Main Runners

BP796133	1600mm Cross Runner
BP793133	1250mm Cross Runner
BP793033	1200mm Cross Runner

Load Data

Module Size	Grid System Weight (kg/m ²)
1200 x 450	1.43
1200 x 600	1.17
1250 x 450	1.42
1250 x 600	1.16
1600 x 450	1.33
1600 x 600	1.08

Ceiling Load Calculator

To determine compliance of system (In accordance with AS/NZS 2785:2020), based on project requirements, apply the following calculator:

- Determine Dead Load (G) = Sum of following:
 - Plasterboard weight in kg/m² = A
 - Grid weight based on module (Fig 2) = B
 - Fixtures Load (Includes lights etc) = C
 Dead Load (G) = Sum (A+B+C) x 1.4 = _ kg/m²
- Add Service Load (U) = 3kg/m² x 1.7 = 5.1kg/m²
- Actual Ceiling Load = G + U = _kg/m²

4. For compliance to AS/NZS 2785:2020, the Calculated Ceiling Load (G+U) must be less than the System Capacity.

Note: Light fixtures and other mechanical services may require additional suspension points or be independently suspended.

Worked Example of Actual Project Ceiling Load: Using 13mm plasterboard and Grid Module: 1200x600mm

- Determine Dead Load (G) = Sum of following:
 - Plasterboard weight in 8.2kg/m² = A
 - Grid weight based on module (Fig 2) = 1.17kg/sm² = B
 - Fixtures Load (Includes lights etc) = Assume Nil based on light fixture = weight of plasterboard
 Dead Load (G) = Sum (A+B+C) x 1.4 = 13.12 kg/m²
- Add Service Load (U) = 3kg/m² x 1.7 = 5.1kg/m²
- Actual Ceiling Load = G + U = 18.21kg/m²
- System complies to AS/NZS 2785:2020, as the Calculated Ceiling Load (G+U) < 18.79kg/sm (being the System Capacity).

Architectural Specifications

Flat Plasterboard Ceilings: Suspended Grid shall be Armstrong Drywall Grid System, comprising of Main Bars and Cross Runners, including Wall Mouldings and Transition Trims, as per manufacturer's instructions.

Curved Plasterboard Ceilings: Suspended Grid shall be Armstrong Drywall Grid System, comprising of Main Bars (faceted) and Cross Runners, including Wall Mouldings and Transition Trims, as per manufacturer's instructions.

Corridors or Plasterboard Margins: Suspended Grid shall be Armstrong DGS ShortSpan, comprising of ShortSpan Tees and StrongBack Support sections (where required), including Wall Mouldings and Transition Trims as per manufacturer's instructions.

Bulkhead / Soffit: Suspended Grid structure shall be Armstrong DGS QuickStix, comprising of QuickStix Tees and Cross Runners, including Wall Mouldings and Transition Trims, as per manufacturer's instructions.

Wall Battening: Wall framing shall be Armstrong Drywall Grid System, comprising of ShortSpan, or Main Bar, including Knurled Channel mouldings, as per manufacturer's instructions.

Contact your Armstrong Office for additional project specification details.

For Seismic Design support please contact your local Armstrong Ceilings office.
